

Faas FH, Earleywine A, Smith WG, Simmons DL. How should low-density lipoprotein cholesterol concentration be determined? *J Fam Pract* 2002; 51:972-975.

An equation in the November 2002 article by Faas et al printed with typographical errors. Here is the corrected equation:  $LDL-C = TC - HDL-C - TG/5$

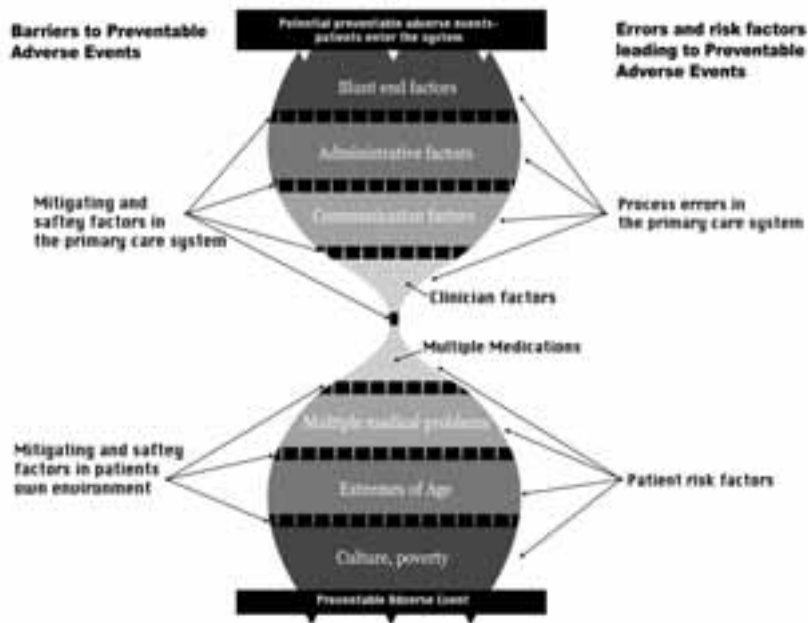

The figures below were inadvertently omitted from the articles noted in the November 2002 issue. Corrected page proofs are available from the authors.

## FIGURE

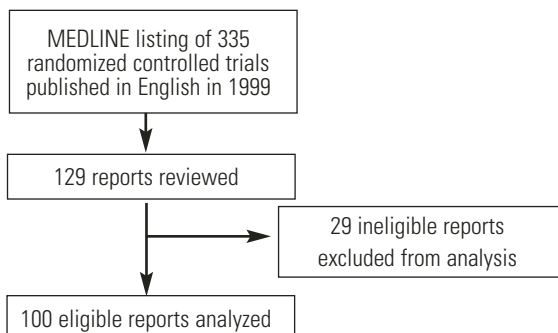

## Hourglass model of interaction

Process errors and patient risk factors are represented by the shaded segments of the hourglass. The volume of the error or risk factor segment is not indicative of relative importance because those data are not currently known. The dashed lines represent the barriers patient safety factors play in stopping errors from progressing. The spaces within the dashed lines represent the imperfections of these safety systems that allow errors to proceed. The hourglass gets shaken and turned over numerous times as the health care system and patient factors interact with each other at multiple levels throughout each encounter the patient has with the health care system.
