

# On Closing the Clinical Trial Participation Gap

BY NANCY WALSH  
New York Bureau

NEW YORK — Racial disparities in access to health care will disappear only when adequate and representative samples of minorities participate in clinical trials, Winston Price, M.D., said at the annual meeting of the National Medical Association.

That disparities in delivery of health care exist is not in question. The Institute of Medicine report "Unequal Treatment: Confronting Racial and Ethnic Disparities in Healthcare" revealed the extent of the problem, showing that disparities remain even after adjustment for factors such as insurance coverage and socioeconomic status.

But a widespread mistrust of the U.S. health care system among minorities—not least because of past abuses such as the Tuskegee Syphilis Study, in which blacks went untreated for many years despite the availability of effective therapy—has led to an unwillingness among African Americans to participate in the clinical trials that might directly benefit their own health.

An increasing understanding of genetic differences and racial differences in response to medications now makes it imperative that minorities be included and their needs addressed in the drug development process, said Dr. Price of the State University of New York Health Science Center, Brooklyn.

The experience with BiDil, a fixed-dose combination of isosorbide dinitrate and hydralazine approved specifically for the treatment of heart failure in black patients, shows it can be done (July 2005, p. 1).

**Successful programs have significant outreach and strong, ongoing relationships with local groups.**

DR. EDWARDS

Dr. Price, who is also president of the NMA, said in a press briefing. "Every single one stayed with that study until completion. The drug was approved by the Food and Drug Administration on June 23, not because it was the right thing to do but because it was pure science and evidence based. All we're asking for is parity."

Other model programs also are demonstrating that blacks can be recruited successfully, Christopher L. Edwards, Ph.D.,

said at the briefing. Programs that are successful tend to be well entrenched in the community; they have significant outreach and education and strong, ongoing relationships with local organizations such as churches and fraternities, Dr. Edwards said.

They do not pressure potential study participants, but rather provide information and allow patients to process the information at home and respond to the investigators when they are ready, he said.

Successful investigators are available to the community not only when recruiting; they are able to articulate the tangible benefits of participation. Dr. Edwards' program in the department of psychiatry at Duke University Medical Center, Durham, N.C., is an example.

"We make ourselves available for interviews on television, religious radio, and pop radio. In one creative marketing plan, we placed advertisements for one of our genetic studies on the side of 20 city buses, and have seen a significant number of patients responding," he said. The overall strategy of information dissemination is to go where the patients are, and not to rely on them to come to us.

In the Duke program, the relevant stakeholders are at the table when recruiting programs are being designed. "If we are recruiting college students, we had students who sat on review panels and ad-

visory boards to give us guidance as to what they would respond to, how, and in what setting," Dr. Edwards said.

Another panel member, Rahn K. Bailey, M.D., said that throughout his career he has been interested in issues such as differences in drug metabolism between African Americans and other patients. For example, about 40% of black patients are slow or intermediate metabolizers of many psychiatric medications, said Dr. Bailey of the department of psychiatry and human behavior, University of Texas, Houston, and chair of the NMA psychiatry and behavioral sciences section.

Because of this, black patients tend to experience more toxicity, and efficacy may be compromised. "It's not surprising to me now that many of my patients over the years have had great difficulty getting better, relapsed a lot quicker, come back to the hospital frequently, and ended up in the legal system because of clinical issues that were not addressed medically," he said.

"In psychiatry it's as if we did all our studies on inpatients and none on outpatients, or in suburban communities rather than inner cities. The distinctions are apparent and actually affect medical decision making," said Dr. Bailey, adding that these issues also are relevant in cardiovascular medicine, neurology, ob.gyn., and other areas of medicine. ■

### PROFESSIONAL OPPORTUNITIES

#### Baton Rouge Area

Hospital sponsored or join existing private Cardiology practice in desirable fast-growing community 15 minutes from Baton Rouge associated with modern 137 bed hospital facility. \$500K salary/guarantee. **Donohue and Associates 800-831-5475 Fax 314-984-8246 E/m: donohueandassoc@aol.com**

**Physician placement firm seeking doctors interested in relocating or making a practice change. Fax CV to 770-908-2203, CV received in complete confidence. NAPR member.**

### PRACTICE FOR SALE

#### Cardiology Medical Practice for Sale

Great So. California Beach Area. Wonderful opportunity. Excellent Hospital Support. Great place to live. Twenty-Eight years established. Annual Collections \$750,000. Excellent net to Doctor. **Visit [www.ppsmedical.com](http://www.ppsmedical.com) or call Professional Practice Sales 949.583.0893**

### PRODUCTS

#### Taking off this afternoon?

You chose the medical field for lots of reasons. One of them was probably the quality of your free time. Is it all you hoped it would be?
