

Full-Time Work No Protection From Medical Debt

BY JOYCE FRIEDEN

Associate Editor, Practice Trends

WASHINGTON — Medical debt is more common among families with full-time workers than among families whose members work part-time, according to University of Iowa researchers at the annual meeting of the American Public Health Association.

"Medical debt can result in credit problems and force people to file for bank-

ruptcy," said Matthew Levi, who is a graduate research assistant in the department of community and behavioral health at the university.

"These problems can be worsened if an individual stops going in for care and using prescription drugs, because untreated problems can prevent a person from returning to work. People with medical debt also report increased levels of stress and anxiety," he said.

The researchers looked at Urban Insti-

tute data from interviews with more than 1,400 residents, some done in person and some by phone.

Subjects were located either in low-income areas of Des Moines or in surrounding Polk County.

Data came primarily from a single question in the survey asking whether the subject or their spouse was paying off any medical debt, although a few other responses also were included.

Surprisingly, people with full-time jobs

were more likely to report medical debt, said Anne Wallis, Ph.D., of the department of community and behavioral health at the university.

"We suspect this reflects having full-time employment, but without health insurance, or with inadequate health insurance," she said.

Families with private health insurance were more likely to report medical debt than families without such insurance. However, this result may have been due to the way data were collected, since Medicaid data were reported separately. "So [it may just show] that families with private

health insurance are not adequately insured," Dr. Wallis said.

Another surprising finding had to do with the household incomes of people reporting medical debt.

"We see almost an upside-down 'U'

'With increases in income, up to a point, people are more likely to have medical debt. They're less likely to have Medicaid or some other type of coverage.'

shape where, with increases in income, up to a point, people are more likely to have medical debt," Dr. Wallis noted at the meeting. "They're less likely to have Medicaid or some other type of coverage, and more likely to be among the working poor." Respondents on welfare also were more likely to have medical debt, she added.

More than one-third of households with children reported medical debt—but without correlation to the child's health status, Dr. Wallis said.

"Where parents reported their child's health as being poor, 100% reported medical debt, in addition to 50% who reported debt if their child's health was fair," she said.

"But even when the child's health was good or excellent, medical debt approached 40%."

The researchers did not find a lot of differences in the amount of medical debt reported when comparing the ages of children in the house; however, there was a dip in the percentage of debt reported by families with preschool-aged children.

"We're not really sure what that's about, [but] a lot of children in this sample are Head Start children, so they would be receiving some services and referrals," Dr. Wallis noted. ■

Customized Coverage

Treats in the presence of some fibroids!

GYNECARE THERMACHOICE III:

Conforms to Most Uterine Shapes and Sizes for Exceptional Efficacy

INFLATED BALLOON

BALLOON IN A CLOVER MODEL

The thin, flexible balloon (left) conforms to extremes, as seen in this clover model (right).

- Improved cornual and lower uterine segment coverage*
- Now able to fill with up to 35 cc of fluid
- World's most proven and #1 doctor-preferred endometrial ablation system

—Only system with published 5-year clinical efficacy, safety, and patient satisfaction data

—Over 300,000 patients treated worldwide

For more information, contact your GYNECARE representative or call 1-888-GYNECARE ext. 1.

For complete information, please consult the Product Package Insert. Rx only. To access GYNECARE THERMACHOICE Essential Product Information, please call 1-877-ETHICON or visit our Web site at www.GYNECARE.com.

*Safety and effectiveness have not been fully evaluated in patients with submucosal myomas.

*Versus GYNECARE THERMACHOICE II.
