

Pediatric *S. aureus* Resistance to Clindamycin Stable

BY DOUG BRUNK
San Diego Bureau

SAN DIEGO — The overall rates of resistance of pediatric *Staphylococcus aureus* isolates to clindamycin remained stable at around 11% in Southern California between 2004 and the first half of 2007, results from a large study of patients from that area demonstrated.

At the same time, overall resistance to both a β -lactam and clindamycin remained

stable at 2.8%, Dr. Mark B. Salzman reported at the annual meeting of the Infectious Diseases Society of America.

"We need to continue to monitor resistance rates of clindamycin and other antimicrobials," said Dr. Salzman, a pediatrician at Kaiser Permanente West Los Angeles Medical Center.

He and his associate, Susan M. Novak-Weekley, Ph.D., identified all *S. aureus* isolates from Kaiser Permanente Southern California patients under the age of 18

years between January 2004 and June 2007.

Kaiser Permanente Southern California is a large HMO system with 11 hospitals, 110 medical offices, and 839,000 patients under the age of 18. The researchers categorized the *S. aureus* isolates by year and by methicillin-resistant *S. aureus* (MRSA) status, methicillin-susceptible *S. aureus* (MSSA) status, and clindamycin susceptibility.

"Only one isolate per patient per year was counted, unless it was different in susceptibility to either clindamycin or

oxacillin or if it was from a different source cultured more than 6 months later," Dr. Salzman said.

In 2004, there were 2,095 *S. aureus* isolates in patients under the age of 18 years, compared with 3,406 in 2005, 4,801 in 2006, and 2,329 in the first 6 months of 2007. MRSA accounted for 33% of isolates in 2004, 43% of isolates in 2005, 45% of isolates in 2006, and 46% of isolates in the first 6 months of 2007. "Since 2005 the pediatric MRSA rates seemed to have reached a plateau," he said.

The number of clindamycin suspension prescriptions nearly tripled over the time period, from 1,276 in 2004 to a projected 3,300 in 2007 based on data extrapolated from the first 6 months of 2007. The number of prescriptions for clindamycin capsules rose from 41,427 to 70,000 in 2007 based on data extrapolated from the first 6 months of 2007.

Clindamycin resistance rates to MRSA isolates were 8% in 2004, 7% in 2005, 6% in 2006, and 7% in the first 6 months of 2007, while the rates of resistance to MSSA isolates were 13%, 17%, 15%, and 15%, respectively. The rates of clindamycin resistance to *S. aureus*, including both MRSA and MSSA, were 11.2% in 2004, 12.3% in 2005, 10.9% in 2006, and 11.2% in 2007. The percentage of isolates that were resistant to both β -lactams and clindamycin were 2.7% in 2004, 2.9% in 2005, 2.7% in 2006, and 3.1% in the first 6 months of 2007, for an overall rate of 2.8%.

"All presumed *S. aureus* infections should be cultured if possible," said Dr. Salzman. "Clindamycin can still be used as empiric therapy for most nonserious *S. aureus* infections, but I think that combining a β -lactam with clindamycin should be considered for empiric therapy of more serious *S. aureus* infections."

He advised that vancomycin be reserved "for life-threatening infections or very serious infections or empiric therapy when other therapies fail in the absence of culture and susceptibility confirmation."

Dr. Salzman disclosed that he is on the speakers' bureau for Sanofi Pasteur. ■

CDC Relaunches Spanish Web site

The Centers for Disease Control and Prevention has relaunched its Spanish language Web site, CDC en Español, with new features. The site provides up-to-date information on health promotion and disease prevention topics of special interest to Hispanic communities, including asthma, cancer, HIV/AIDS, immunizations, children's health, diabetes, and occupational hazards. The Web site address is www.cdc.gov/spanish. ■

SAVE THE DATE: **MARCH 1-7, 2008**
AND SAVE NOW WITH EARLY REGISTRATION
FOR THE MOST COMPREHENSIVE CME DERM MEETING OF THE YEAR!

SKIN DISEASE EDUCATION FOUNDATION'S

32nd Annual

Hawaii Dermatology Seminar™

a continuing medical education conference

HILTON WAIKOLOA VILLAGE
WAIKOLOA, HI

This activity has been approved for AMA/PRA Category 1 Credit. (Number of credits is pending.)

Learn the latest from the best. Thirty-two incomparable years of continuing excellence; the highest quality comprehensive scientific education delivered by distinguished faculty leaders; a collegial, family-friendly environment that encourages a lively exchange of ideas – just three of the reasons why SDEF's Hawaii Dermatology Seminar has grown into the premier CME derm meeting of the year.

Don't miss this outstanding opportunity to get up-to-date on the future of dermatology. Reserve your place today and take advantage of **Early Registration Savings**. To register or for more information, visit www.sdefderm.com or call 312.988.7700.

MEDICAL DIRECTORS

David J. Goldberg, MD, JD
Clinical Professor, Mount Sinai School of Medicine
Director, Skin Laser & Surgery Specialists of NYINJ
New York, NY

Christopher B. Zachary, MBBS, FRCP
Professor and Chair, Department of Dermatology
University of California, Irvine, CA

PLANNING COMMITTEE

R. Rox Anderson, MD
Director, Wellman Center for Photomedicine,
Massachusetts General Hospital
Professor, Department of Dermatology
Harvard Medical School, Boston, MA

Lawrence F. Eichenfield, MD
Professor, Pediatrics and Medicine (Dermatology)
Chief, Pediatric and Adolescent Dermatology
Rady's Children's Hospital-San Diego
University of California, San Diego School of Medicine,
San Diego, CA

Allan C. Halpern, MD, MSc
Chief of Dermatology
Memorial Sloan-Kettering Cancer Center
New York, NY

Maria Hordinsky, MD
Professor, Head, Department of Dermatology
University of Minnesota, Minneapolis, MN

Derek H. Jones, MD
Assistant Clinical Professor of Medicine
Division of Dermatology
