

Patient Registries Improve Quality at Modest Cost

BY MARY ELLEN SCHNEIDER
Senior Writer

PHILADELPHIA — A costly electronic health record system is not necessary to engage in quality improvement and participate in the growing number of pay-for-performance programs, Dr. Rodney Hornbake said at the annual meeting of the American College of Physicians.

Patient registry software is a lower-cost alternative that allows physicians to track their care of patients with chronic diseases.

"It's really an excellent starting place for quality improvement in the ambulatory setting," said Dr. Hornbake, an internist in private practice in Essex, Conn.

Patient registries are one of the best tools for physicians participating in pay-for-performance programs, Dr. Hornbake said. Many electronic health records (EHRs) may not have population-based functionality, and therefore cannot generate simple reports on the physician's performance on certain measures. Most EHR

vendors can build interfaces with patient registry software, but that's generally an added cost, he said.

There are a number of patient registry programs available; a comprehensive program can be purchased for less than \$1,000 per provider, Dr. Hornbake said. Some are available for free.

For example, Dr. Hornbake tested the Comorbid Disease Management Database (COMMAND) software in his practice. This registry system is available for free from the Mississippi Quality Improvement Organization. And technology-savvy physicians can use programs like Microsoft Access to design their own registries, he said.

Dr. Hornbake tried out COMMAND in his practice to help keep up with the pay-for-performance programs in his local market. One insurer—Anthem Health Plans Inc. of Connecticut—has a program that offers incentives for process and outcomes measures, as well as for the use of health-related information technology, including electronic prescribing, EHRs, and

patient registries. The insurer also offers incentives to physicians for generic prescribing, he said.

Dr. Hornbake said that he exported demographic information from his billing system into COMMAND and manually entered the clinical information from patient charts himself. After using the billing system to identify all of the patients who had conditions included in his registry, he had his staff put red stickers on those patient charts.

This flagged the patients for special attention from the staff, he said. For example, patients whose charts had stickers received follow-up calls if they missed an appointment. To keep the registry up to date, every 2 months the staff pulls the charts of all registry patients and Dr. Hornbake updates the system manually. He spends about 1.5 hours entering data on 125 patients.

He said he prefers to enter the information in periodic batches, because it helps him to identify any chronic disease patients

who have slipped through the cracks.

Even factoring in his time, Dr. Hornbake said that he saw an immediate return on investment with the patient registry system. Unlike implementation of an EHR system, he added, patient registry software tends to fit in easily with the normal workflow of the office.

Physicians also can manage their patient care using a paper-based patient registry, he said, but once they begin to track 20 or more measures, a paper system quickly becomes unworkable.

So far, Dr. Hornbake said that he has resisted purchasing an EHR system because he still can't make a financial case for the investment. He advised physicians to buy or upgrade an EHR system based on its ability to support pay for performance and manage a population of specific patients. Many of the other selling points for an EHR system—that it will eliminate transcription, cut down on needed staff positions, and improve coding—don't hold true for all physicians. ■

PROFESSIONAL OPPORTUNITIES

The USIDNET, A NIH-sponsored national consortium to promote the study of primary immunodeficiency, has established several new exciting programs for young physicians interested in research and management of primary immunodeficiency diseases.

- Short Term Training
- Traveling Scholarships
- Summer School
- Laboratory Training Experience

All programs are targeted toward young physicians interested in research and management of primary immunodeficiency. Senior medical students and recent medical graduates in residencies or research fellowships are also invited to apply. All programs provide paid stipends.

Visit the US Immunodeficiency Network website at www.usidnet.org for more information or call Tamara Brown at (800) 296-4433 Ext 211.

PRODUCTS

Help your patients' families with the frustration of nocturnal enuresis

Your patients' families find what they need to support your treatment plan at the Bedwetting Store, America's favorite source for alarms, waterproof bedding, books and supplies.

Call 1-800-214-9605 for a supply of catalogs.

- Bedwetting alarms
- Waterproof bedding
- Vibrating watches
- Books on bedwetting

Order your FREE patient catalogs.

Respect, Integrity, Compassion...

when a healthcare organization is committed to these values, the whole community benefits. Allina Hospitals & Clinics is a group of 11 hospitals and 65 clinics in Minnesota and western Wisconsin. We are proud of our values and of the difference we are able to make in the lives of many. If you are guided by these values... **We have a place for you.**

Our NEW Allina Medical Clinic in St. Michael, MN is currently seeking a Pediatrician

Located 25 miles NW of Minneapolis, this is a great opportunity in a booming family friendly community easily accessible to the Twin Cities metro area. This new clinic is scheduled to open March 2007.

- Admit to Buffalo Hospital, located approximately 12 miles from clinic
- The clinic will offer open access and a full service Lab and X-ray
- Full-time practice (32 patient contact hours per week plus call)
- Electronic Medical Record Availability

We offer a competitive salary, comprehensive benefits package and malpractice insurance.
